

Images of the ISS Passing Over Keene, NH on 02.27.2018

And so it came to pass that the ISS was scheduled to pass over Keene, NH on February 27th. Heavens Above listed the start time as 05:42:41am in the SW and ending at 5:49:03 in the ENE. Worth a shot. Awake before 5am, checked the sky, decided “what the heck”, and got my Canon 80D with the Rokinon 14m lens attached on the tripod. Set up the camera on the deck off our kitchen. Clock was ticking...

The six astronauts appeared on schedule and the camera began clicking. The first image shows the ISS rising in the SW above Jupiter and with Arcturus sitting above and behind. The second is the spacecraft between Yed Posterior and Yed Prior in Ophiuchus. The third image is the ISS passing an airplane. And the last image as it approached our birch tree has the ISS passing through the summer triangle.

Details: f/2.8; ISO 320, 3-10 seconds. You may wish to enlarge the photos, but just realize you can't make out any of the six men...
